

▶ Rated Breaking Capacity

Rated breaking capacity is the maximum short-circuit current allowed for the fuse link to cutout reliably under rated voltage. The instantaneous current loaded to the fuse link is much larger than the normal working current when short-circuit occurs. The fuse link is supposed to cutout the line in an undamaged condition i.e. without bursting. The rated breaking capacity of MIRO fuses is up to 120ka and the excellent current limiting characteristics reliably protect the equipment from damages by electric power.

Wave curve of current limiting characteristics of fuse link

Where: I_s -peak value of maximum asymmetric current at 100KA perspective current I_p (The impulse factor of a short circuit should be 1.5).

I_D - the actual current at breaking (limiting current)

U_s -Arc voltage

U - Voltage

t_s - melting time

t_L - Arcing time

α - Burning corner of arc after zero voltage.

▶ Fuse Supporter (Fuse Base)

In many application cases, fuse links are installed on fuse supporters/fuse bases. They are not to be used as switches for connection and disconnection of the load.

▶ Factors To Be Considered For Selection Of Fuses

1. normal working current
2. working voltage
3. ambient temperature
4. overload current and cutout time
5. possible malfunction current
6. impulse current, surge current, starting current and transient value of the line
7. size and dimensions, connection methods, indicators, etc.

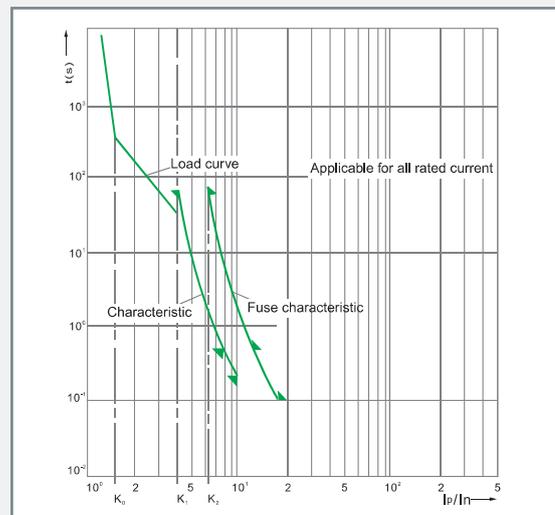

▶ Threshold Values Of aM Fuses

Gate limit of "aM" type fuse links:

$I_p(I_n)$	4	6.3	8	10	12.5	19
$t_{\text{Fuse}} <$	(s)	-	60	-	-	0.10
$t_{\text{Before arc}} >$	(s)	60	-	0.5	0.2	-

Note: I_p -Perspective current

I_n -Rate current of fuse link

"(aM)" Time of fuse links -----Current strip

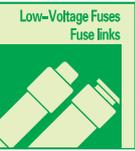

Low Voltage Fuse

Professional High Voltage And Low Voltage Fuse Manufacturer

Fuse Links

Cylindrical Fuse Links

► Applications

Protection against overload and short circuit in electric lines (type gG), also available for protection of semiconductor parts and equipments against short-circuit (type aR) and protection of motors (type aM).

Rated voltage up to 660V; Rated current up to 125A; Working frequency 50Hz AC; Rated breaking capacity up to 100KA. Compliant with GB13539 and IEC269.

► Design Features

Variable cross-section fuse element made from pure metal sealed in cartridge made from high-duty ceramic or epoxy glass. Fuse tube filled with chemically treated high-purity quartz sand as arc-extinguishing medium. Dot-welding of fuse element ends to the caps ensures reliable electric connection; Striker may be attached to the fuse link to provide immediate activation of micro-switch to give various signals or cut the circuit automatically.

Special fuse as per Figure 1.2~1.4 can be supplied according to customers requirements.

► Basic Data

The models, dimensions, ratings are shown in Figures 1.1~1.4 and Table 1 .
